ASET release notes

Version 2003r963

Lo Farnan

24th August 2023

Release notes

Changes and bug fixes

1. Changes made to the Sysmex SUIT interface to support host query mode.

2. Updated the HL7 generation escape methods to fix an error in escaping the ^ character.

3. Modified the HL7 result reporting method to force any associated result comment to be created as an attached NTE segment and not as part of the OBX result segment.

4. Added an HL7 export method to the send away (referred test) export options. Request HL7s are generated and saved in a sub directory named after the defined test agent (referral lab).

Customer specific changes

1. Fixed a screen redraw issue on the MHL request entry screen. (M)
