ASET release notes

Version 2003r957

Lo Farnan

8th June 2023

Release notes

Changes and bug fixes

1. When requests are entered using the HL7 import mechanism, under some circumstances the samples associated with the requested tests were not being properly assigned when the request is received. This has now been resolved.

2. Some tests reported via the HL7 export interface were having the test status wrongly assigned as 'IP' when they should have had the status 'F' (Final). All reported tests now have the 'F' status reported.

3. When using the reporting button on the lookup report screen:

The save PDF option was not working properly:

This was saving a small PDF with no content. This has been resolved.

4. An entry filter previously added on the 'Test name' and 'Reported as' fields in the test definition entry screen has been removed.

This was preventing the entry of some characters in test names. Any printable character is now accepted.
